

DARIM and Intelligent Lectern Systems use IBC as platform to launch their cooperation.

DARIM will feature for the first time the ILS intelligent and elegant lecterns that house the VR Presenter technology inside the lectern for instant delivery, recording and streaming of presentations and lectures. Through automated user friendly touch control of presentations and of the presenter's captured video image, data and video mix into a single XGA output to project and to stream over IP.

The new generation presentation delivery tools are so easy to use and automated that a presenter can take care of the total system operation himself. Remote viewers watch a full XGA picture over standard ADSL connectivity.
